

Webinar: What the Muck?

What exactly is organic sediment, and why does it matter for your waterbody?

Join us to explore how muck forms, the role it plays in your aquatic system, and the hidden ways it can affect water quality and health. Dive into the fascinating world beneath the surface and uncover the truth about muck!

Meet the Presenters

Kate Waters-Hart, PhD
Global Limnologist, Oase

Dr. Kate specializes in lake restoration, focusing on phosphorus mitigation and eutrophication impacts. Her 2020 PhD research at the U.K. Centre for Ecology & Hydrology and the University of Stirling explored aquatic plant recovery after lanthanum-modified bentonite treatments.

Jordan Meissner, VP of Water Technologies,
North America, Oase Professional

Jordan leads Oase Professional's Lake Therapy solutions in North America. With over a decade of experience in the environmental industry, he has held leadership roles at premier lake management and water technology companies, driving strategic sales and operations.

Greg Wagner
U.S. Sales Manager, Oase Professional

Greg transitioned to the aquatics industry in 2022, focusing on nutrient remediation to address water body health. With a background in industrial water treatment and chemistry, he plays a key role in advancing Oase's Lake Therapy products in the lake and pond management sector.

Date: Wed. February 19, 2025

Time: 4:00pm GMT

The webinar is completely free to attend, will last approximately one hour and there will be an opportunity to have your questions answered during a live Q&A at the end.
